AEROSOLV™ CAN PUNCTURING SYSTEM

A safe and economical means to empty and dispose of aerosol cans. Easy-to-use, hand-operated, no power source necessary. Handle moves a puncture pin through a fluid-tight chamber and pierces can; no worker contact required.

Unique carbon filter coalesces VOC's in filter reservoir. Residual contents safely collected in drum.

- Excellent savings on hazardous waste disposal costs
- Punctured cans may be recycled as scrap metal
- Residual liquids collected in drum may be eligible for reclamation through a hazardous waste handler, resulting in waste minimization credit
- Accommodates cans in wide assortment of shapes and sizes
- Puncture pin designed for long-term use; no visible wear after puncturing 10,000 cans

5517 PYROPLEX® BLUE #2

- Maintains mobility while building tack and adhesion when faced with water contamination
- The Hydro-Activated technology helps it resist softening and washout when exposed to wet conditions on a continued basis
- The extreme pressure and anti-wear additives promote extremely long bearing life
- In high temperature environments, it adheres to metal surfaces and provides a strong barrier of protection for critical components
- Because it stays in place, there is less need to add grease, which equals less grease usage and extended lubrication intervals
- Multifunctional use for both on and off road
- Superior rust and oxidation control
- Dependable performance under varying conditions reduces maintenance costs while extending equipment life
- Does not use antimony, barium, lead, or chlorinated compounds, reducing environmental impact

AG347

5877 PYROPLEX® GOLD #2

- Uniquely formulated, semi-synthetic, aluminum complex grease that excels in heavily loaded construction, mining and industrial equipment where extreme operating conditions prevail
- Extreme pressure and anti-wear performance especially in highly shock loaded areas
- 6% molybdenum disulfide solids
- Semi-synthetic basestock for unique cold flow and pumping capabilities
- Excellent thermal stability with a high dropping point
- Enhanced "stay in place" technology with hydro-activated polymers providing very low water spray-off rates
- Aluminum complex thickener
- Will excel in multiple bearing applications, sliding applications, bucket pins, highly shock loaded areas, and asphalt paver auger bearings where extreme pressure and high heat exist
- Has assured pumpability in most cold environments that eliminates the traditional approach of changing to a NLGI 1 grade in winter

SMARTWASHER®

SmartWasher® uses the process of **bioremediation** - the accelerated break down of organic compounds such as grease, grime, varnish, oil, carbon and other heavy industrial soils through the use of nonpathogenic microbes. The microbes, suspended in a fluid that re-circulates through the unit, literally **eat their way through soils**, converting them into harmless water and carbon dioxide (CO₂). The solution remains clean and usable, unlike traditional solvent-based systems where the solution becomes dirty and less effective over time. Disposal becomes a non-issue, as hazardous waste streams are eliminated.

JUST SAY NO!

DRIVE FITTINGS

- Used extensively to avoid tapping costs in a wide variety of applications
- Alemite serrated shank grips securely and simplifies the replacement of damaged fittings in old or oversized holes
- Recommended only for low and medium pressures

IMPORTANT

Actual drill sizes cannot be shown because drilling varies with hardness of metal. Drill sizes indicated on drawings are merely a guide. Exact drill size can only be determined by sample drilling of the actual metal. When drilled to proper tolerance, the serrated edge of the fitting will provide a secure, lasting grip.
