## Celebrating 41 Years

Greetings!

Happy June! The sun is shining more, it is heating up and business is slowly returning to the NEW Normal.

In this issue a Tim the Technician gives us a little info on stopping leaks, we have a fabulous offer on an electric pallet truck and our monthly truck specials as well.

We would love to hear from you. Contact us today, or [visit our website](#) to learn more.

---

## Tim the Technician Says

### Stop Leaks Before They Happen

While leaks can happen from any of the fluid systems that exist within a forklift, we found hydraulic hoses to be the most common leak point. And while the bad news is that these leaks can't be completely prevented, the good news is that regular maintenance can reduce them.

It is important to understand the structure of a hydraulic hose in the first place, in order to understand when they are at risk of failing. Hydraulic hoses are coated in thick rubber, but underneath that rubber is a wire substructure. Because the pressure from hydraulic fluid can be as much as 2,300 PSI, that wire structure is necessary to cope with the extreme pressure. Problems arise when the rubber is cracked and the substructure becomes exposed.

That's why regularly checking hydraulic hoses for wear should be part of any operation's maintenance schedule. This is especially important for any hoses that move frequently during operation, such as free lift hoses. If the wire substructure in the hose can be seen or felt, the hose should be replaced immediately to prevent a costly (and messy) failure.

## June SPECIALS - Electric Pallet Truck

**Lift Line Machinery**

Model # EPT4527X48

**Electric Pallet Truck**

**Price**  
**\$ 3,550**

**Powered Pallet Truck**

**Unbelievable Price**  
Going back to \$4990 Aug 1st 2020

**Specs**

Width	27"
Length	45.3"
Capacity	4,500 lbs
Power up	Keyless Fob
Battery	48V Lithium Battery
