

Raising the Standards for Material Handling since 1979.

“Luck can only get you so far” -JK Rowling

‘Tis the month for *shamrocks* and *luck*, but when it comes to safety, planning and preparation are your best bet! *March* your way over to page 2 to read about aerial devices and how we can help keep you safe.

Check out page 4 for tips on how to make sure your equipment is ready for Spring.

There’s no point in *fiddle*-ing with old, rusted equipment. Check out page 5 for a sale on Shop Essentials. Your *leprechauns* will thank you!

Happy St. Patrick's Day!

Sky High Safety

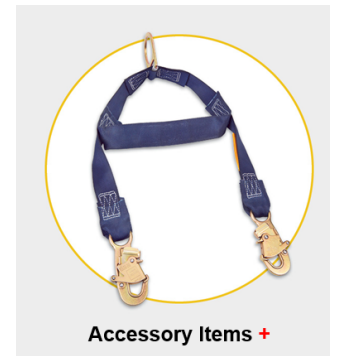

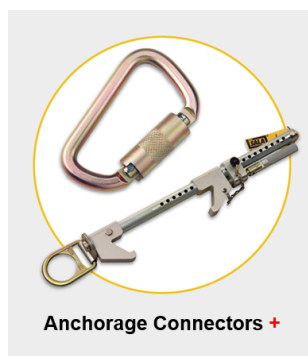

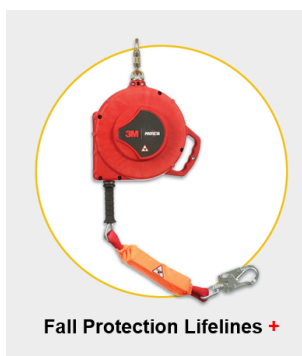

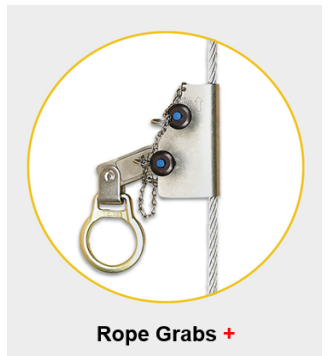

An aerial work platform (AWP), also known as an aerial device, elevating work platform (EWP), cherry picker, bucket truck or mobile elevating work platform (MEWP) is a mechanical device used to provide temporary access for people or equipment to inaccessible areas, usually at height. It is imperative that we use the utmost safety while using these devices.

Falls are the number one injury incurred while using aerial devices and the best way to prevent them from happening is to use proper personal protective equipment (PPE). Harnesses, Lanyards, Connectors are vital for your protection and could save your life. It is important to inspect them to ensure they are effective and in good condition.

Need to update your PPE? Reach out and we'll help keep you safe!

SHOUT OUT TO...

Local businesses

We would like to highlight local businesses in this new section of our newsletter.

Local businesses don't only build a stronger economy — they also build a stronger community. Relationships between small businesses are important in creating a cohesive, welcoming community identity, with businesses supporting each other.

As a thank you for supporting our small business, we would like to show support for yours!

Niagara Prehung Doors

Back in 1969, Niagara Prehung Doors was established. Fast forward 54 years, and now we are a third generation, family run company serving the Niagara Region and beyond. We pride ourselves in our quality residential doors, knowledgeable staff, and friendly service. Our main focus is on exterior door systems and installation. Our in-house installers are experienced, detailed and meticulous, proving their professionalism from day to day.

From the first step into our beautiful showroom, speaking to our sales rep, to the finished product in your home, we strive for an outstanding performance.

Last year, we considered buying a forklift. Lift Line let us use a truck for a 2 week trial to make sure it was the right one for us. It was, so we bought it. The service was great!

SPRING MAINTENANCE FOR YOUR FORKLIFT

Spring is on its way so we anticipate the promise of warmer weather and longer days. But as we eagerly await golf, gardening, and all things outdoors; let's shift to getting your forklifts ready for warmer weather. Just as we work to get our homes in tiptop shape, spring is the perfect time to make sure your forklifts and material-handling equipment are well maintained. Here are some tasks to put on your spring maintenance to-do list:

- Check batteries, cables, electric wires, and spark plugs for wear and tear
- Inspect hoses and valves for leaks or breaks in sealing
- Check fluids for proper levels, color, and odor

Top performance from your lift trucks and reducing downtime is always a goal, but proactive maintenance in the spring will help prevent the loss of production caused by hot weather failure. Connect with us to address your warm weather maintenance needs. Things your service tech will check:

- Hoses - to make sure there are *no splits or cracks*
- Engine coolant - to see if the *correct coolant* is being used
- Thermostat - to be sure it is *working* properly
- Fan and fan belt - to *remove* any debris and *replace* if worn or broken
- Radiator screen - *blowout* any built up debris
- Fluids and filters - *top off* and *change* if needed
- Wiring - *replace* any damaged wires and *clean* corrosion that can build up
- Hydraulic system including the pump, cylinders, hoses, and valves - *look* for any leaks and wear

If you have an electric forklift, your service tech will check the battery. If it's old or corroded and not putting out proper voltage, your forklift will not run at its correct capacity—or not at all. So it's essential to clean the corrosion or replace the battery entirely. Be sure to continuously check the water levels in each cell of the battery. Extreme heat can cause water to evaporate quicker.

Remember, the hotter the weather, the harder the system will run. Increased heat and humidity force the components to work harder than usual and wear at a faster rate. So connect with us for a proactive maintenance plan, one that helps your forklifts run better when things heat up. We are ready to be your material-handling solutions partner.

44 years ago Lift Line Machinery Ltd. began with the following Customer Bill of Rights :

Our Customers Have the Right to Expect:

- timely service as viewed from their perspective;
- service at a reasonable expense;
- courtesy, respect and empathy regardless of the situation;
- us to listen so as to understand their problems;
- communicate clearly and concisely with them;
- us to fix it right the first time and provide zero defects;
- expect all of our people to be qualified;
- us to be dedicated to go the extra mile;
- personalized service that addresses their specific needs;
- cleanliness in whatever our service for them might be.

We have stuck to this Customer Bill of Rights every day since 1979!
