Things are warming up

A perfect summer day is when the sun is shining, the breeze is blowing, the birds are singing, and the lawnmower is broken. And don't forget a cold glass of your favourite liquid in hand!

Take advantage of the upcoming season to embark on new adventures and to ensure that your equipment is in great working order. Call our Service Department to book your PM service and to stay ahead of potential mechanical issues.

Happy Solstice!

Do Safety Rules Compete with Productivity?

It is a common misconception that safety rules hinder productivity. In reality, well-designed safety protocols should not only support a safe working environment but also enhance overall efficiency. The best safety rules are those that are intuitive—clear, easy to understand, and directly relatable to the tasks at hand. When workers understand why a safety rule exists and how it protects them, they are far more likely to comply.

Effective safety procedures should be seamlessly integrated into everyday work routines. When embedded into standard operating procedures (SOPs), safety practices become second nature rather than a disruptive add-on. Instead of competing with productivity, they support a smooth and organized workflow. This in turn minimizes risks that could lead to injuries, product and equipment damage, or other operational delays.

One of the few exceptions might be the pre-operational inspection, which could be viewed as an added step before beginning work. However, this relatively small investment of time pays off by identifying potential issues before they become hazards, ultimately preventing costly accidents or breakdowns later in the process. There are other methods of increasing the productivity and accuracy of the inspection as well.

In conclusion, safety and productivity are not at odds. When properly designed and communicated, safety rules serve as a foundation for efficient, sustainable work practices that benefit both individuals and the organization as a whole.

Self Dumping Hoppers

A self-dumping hopper is an essential forklift attachment for any commercial and industrial workspace dealing with large and heavy (waste) materials. The dump hopper is used in a variety of industries such as construction, warehousing and lumber processing to store and relocate heavy loads with a forklift. Excellent for handling heavy, bulky scrap, in-plant housekeeping, in-process materials, sorting and storing, castings, wood, metal chips, recyclables, and sludge.

FOR SALE—in stock

1/2 Cubic Yard (2,500 lb capacity) \$960.00

1 Cubic Yard (5,000 lb capacity) \$1,190.00

1 1/2 Cubic Yards (5,500 lb capacity) \$1,635.00

FOR RENT—1 cu yd

Weekly \$100.00

Monthly \$250.00

46 years ago Lift Line Machinery Ltd. began with the following Customer Bill of Rights:

Our Customers Have the Right to Expect:

- timely service as viewed from their perspective;
- service at a reasonable expense;
- courtesy, respect and empathy regardless of the situation;
- us to listen so as to understand their problems;
- communicate clearly and concisely with them;
- us to fix it right the first time and provide zero defects;
- expect all of our people to be qualified;
- us to be dedicated to go the extra mile;
- personalized service that addresses their specific needs;
- cleanliness in whatever our service for them might be.

We have stuck to this Customer Bill of Rights every day since 1979!
